

WILL CNG VEHICLES WORK WELL IN YOUR FLEET?

Participate in the Honda/FuelMaker Demonstration Program
to Find Out!

Experience your own real world test of a Honda Civic GX compressed natural gas (CNG) sedan with the ease and convenience of on-site fueling. This unique program provides your fleet with the extended free use at your facility of both a Civic GX and a FuelMaker natural gas fueling appliance.

Numerous Pennsylvania municipalities have already taken advantage of this opportunity. Here's how the program works -- A FuelMaker unit and Honda Civic GX are provided without cost to test in your municipal fleet for two to four weeks. The municipality's only out-of-pocket cost is installation of the FuelMaker unit to the existing natural gas line at your location of choice. The Business Administrator or other municipal official responsible for the program schedules the use of the Civic GX between various departments, such as parking enforcement, code enforcement, building inspection, health inspection and public housing.

The Honda Civic GX, assembled in the USA with more than 80% American parts and powered by clean North American fuel. PA Municipal fleets can take advantage of rebates from Pennsylvania and Greater Philadelphia Clean Cities Program (GPCCP) for the purchase of this high-quality, durable and nearly pollution-free car. Municipalities can further reduce program costs by taking advantage of generous discounts provided by Honda and FuelMaker for the purchase of FuelMaker refueling systems.
